

2011 Contact Lenses & Solutions SUMMARY

Compiled by Paul White, OD

The New England College of Optometry, Boston, Massachusetts

Sponsored by

A supplement to the July 2011 Issue of

Contact Lens
SPECTRUM

DIVISION OF
Johnson & Johnson Vision Care, Inc.

Dear Colleague:

VISTAKON®, Division of Johnson & Johnson Vision Care, Inc. is pleased to once again sponsor the *Contact Lenses and Solutions Summary (CLASS)* supplement. We continue to believe that this CLASS supplement serves as a valued source of information. As in past years, the 2011 version of CLASS appears as a supplement to the July issue of *Contact Lens Spectrum*, and can also be viewed at www.clspectrum.com/class.

We thank Dr. Paul White and the employees at *Contact Lens Spectrum* for their efforts in compiling the extensive amount of data found in this publication. We also express our gratitude to our colleagues around the world for their ongoing support of our ACUVUE® Brand family of products.

As part of our ongoing commitment to vision care, we are actively investing in contact lens research and development, so that we can continue to develop innovative new products for clinical practice. As manufacturers, we also see it as our responsibility to clearly articulate the evidence and clinical experience behind them so that you can prescribe every ACUVUE® Brand lens with great confidence.

Johnson & Johnson Vision Care, Inc. is dedicated to bringing "*Healthy Vision to Everyone, Everywhere, Everyday.*" That is why our commitment to optometry, optometrists, and patients extends beyond our products.

Johnson & Johnson Vision Care, Inc. continues to advance the profession of optometry with more than \$10 million in support to more than 100 optometric associations and societies over the past five years. This is in addition to partnering with various optometry schools, supporting approximately 50 events for promotional funding per year, and funding more than 100 Continuing Education events annually. Johnson & Johnson Vision Care, Inc. also acted as the sole sponsor for the 2010 "Women of Vision" event at AAO.

THE VISION CARE INSTITUTE™, LLC, a Johnson & Johnson Company (www.tvci.edu.com) is an innovative professional resource for eye care providers that offers participants a rare opportunity to experience the latest in vision diagnostic and treatment technologies through hands-on instruction, including training on contact lens fitting and prescribing. THE VISION CARE INSTITUTE™ has reached over 42,000 professionals worldwide and has committed millions of dollars to programs such as Optometry's Career Center®, ProjectSEE, and to InfantSEE®, a no-cost public health program designed to ensure that eye and vision care become an integral part of infant wellness and improve a child's quality of life.

We welcome any comments you would like to share with us about our products, programs and/or policies. We can be reached at: PA@its.ini.com.

With warmest regards,

A handwritten signature in black ink that reads "Colleen Riley". The signature is fluid and cursive, with a large loop at the end of the last name.

Colleen M. Riley, OD, MS, FAAO

To the Contact Lens Practitioner

Contact Lenses & Solutions Summary's goal is to provide you with a concise, easy-to-use, chairside informational source to aid in patient care decision-making. It follows the K.I.S.S. philosophy - keep it simple and streamlined. We have incorporated list prices for soft contact lenses, however **these prices are approximate**, and are provided as a guideline. For exact pricing, costs for atypical powers or other parameters, warranty or exchange policies, or for more information about products, contact the manufacturers and distributors listed on Page 29.

To provide you with a method to compare lens designs, we've taken the liberty of standardizing manufacturers' descriptions of their lens parameters. Unless otherwise indicated, center thickness specified is for average minus power. We've arranged lenses by brand name rather than by company because that's how we refer to them in practice. In addition, ongoing corporate acquisitions make brand identification a more consistent system as all names are registered or trademarked.

In addition to registered or trademarked names, each material has a generic name. Because an understanding of generic hydrogel materials is important as it relates to disinfection systems and Dk values, **please take a moment to read the information under Hydrogel and Silicone Hydrogel Lens General Considerations on Page 5.**

Due to the growing popularity of silicone hydrogel contact lens prescribing and in response to reader requests, we have made the words **Silicone hydrogel** bold in all silicone hydrogel lens listings to make those listings easier to locate.

We trust the *Contact Lenses & Solutions Summary* continues to fulfill your needs. It is made possible through an educational grant from VISTAKON, Division of Johnson & Johnson Vision Care, Inc.

Paul White, OD

Soft Contact Lenses

Hydrogel and Silicone Hydrogel Lens General Considerations

The FDA gives each contact lens material a generic name. In general, all hydrogel and silicone hydrogel lens generic names end in the suffix “filcon” and all nonhydrogel lenses end in “focon.”

Hydrogel lenses are categorized into four groupings for purposes of evaluating effects of accessory products upon the lens material. Lenses with less than 50 percent water content are considered to be “low water” and the others are “high water.” Less reactive surfaces are termed “nonionic” and more reactive materials are labeled “ionic.” Silicone hydrogel lenses are low water.

Disinfection of hydrogel and silicone hydrogel lenses can usually be done safely and effectively by approved chemical or hydrogen peroxide systems. However, some Group 4 ionic polymers may react negatively with potassium sorbate- or sorbic acid-preserved solutions.

In the term Dk, D stands for diffusion and k for solubility. The oxygen permeability of hydrogel lenses is almost entirely the result of solubility and for GP materials almost entirely the result of diffusion. In silicone hydrogel materials, oxygen permeability is a combination of solubility and diffusion, with the larger amount from diffusion. That is, the hydrogel component in the formulation

provides solubility and the silicone component provides diffusion. Each generic material below is accompanied by a representative Dk number.

A clinically useful approximation is to consider Dk values for **hydrogel lenses** in three groups:

H ₂ O	Dk
38±%	9±
55±%	18±
75±%	36±

It is also important to remember that Dk/t (central transmissibility) and Dk \sqrt{t} (average overall transmissibility) are dependent upon contact lens thickness configuration and are more important than Dk with hydrogel lenses. With silicone hydrogel contact lenses, Dk/t and Dk \sqrt{t} are more similar than with hydrogel lenses.

This table should assist you in identifying specific lenses in each category as related to disinfection and Dk; and it will also help you determine an appropriate mix of lens types for your practice.

GROUP 1

Low Water (<50% H₂O)

Nonionic Hydrogel Polymers

tefilcon (38%) (Dk = 8.9)

- Illusions
- STD
- Softint
- LL Bifocal

Customized Tinting

Adventures In Color Technology, Alden Optical, Crystal Reflections, Custom Color Contacts, Specialty Tint, and Ciba Vision Special Eyes Program provide custom tinting of soft contact lenses for prosthetic and other uses. For specific information, call them. Their telephone numbers and addresses are listed in the company directory at the end of this booklet. Marietta Vision states that the Chromagen lens is available for certain color deficiencies. It has a 5mm to 7mm tinted optic zone and custom parameters. Call (866) 300-6257 for details.

Gas Permeable Lenses

GP General Discussion

In the United States, after receiving their FDA Pre-Market Approval (PMA), almost all companies that are PMA holders chose to produce their material in semi-finished buttons which they supply to independent laboratories for custom manufacture and distribution. Because there are over 300 such laboratories who often affix their own trade name to these lenses, it is neither practical nor useful to list them all. Therefore, we have chosen to provide the basic characteristics of the custom design materials.

For specific information on custom-designed lenses, contact your independent laboratory. In this context, custom-designed refers not only to spherical lenses, but also to toric and multifocal lenses. Many independent laboratories are members of the Contact Lens Manufacturers Association. To access addresses, phone number, etc., visit the Gas Permeable Lens Institute's searchable online database: www.gpli.info.

Soft Contact Lens Solutions

Non-Thimerosal Preserved Saline

Manufacturer	Trade Name	Formulation
Bausch + Lomb	Sensitive Eyes Saline Solution	A sterile, isotonic, buffered solution containing boric acid, sodium borate and sodium chloride; preserved with sorbic acid 0.1% and edetate disodium 0.025%
	Sensitive Eyes Plus Saline Solution	A sterile, isotonic, buffered solution containing boric acid, sodium borate, potassium chloride, sodium chloride preserved with polyaminopropyl biguanide 0.00003%, and edetate disodium 0.025%

Unpreserved Saline

Manufacturer	Trade Name	Formulation
Alcon	Unisol 4	Buffered saline in 4 oz. bottles
PuriLens Plus	PuriLens Solution	Isotonic, buffered saline in 4 oz. bottles

Daily Cleaners

Manufacturer	Trade Name	Formulation
Alcon	Opti-Clean II	An isotonic formulation containing tween 21, and special polymeric cleaning agents preserved with edetate disodium 0.1% and Polyquad 0.001% (polyquartenium-1)
	Opti-Free Daily Cleaner	An isotonic formulation containing tween 21 and microlens beads preserved with EDTA 0.1% and Polyquad 0.001% (polyquartenium-1)
Bausch + Lomb	Sensitive Eyes Daily Cleaner	Easy-rinsing formula with balanced viscosity, containing poloxamine, a borate buffer system sodium chloride, hydroxypropyl-methylcellulose, preserved with edetate disodium 0.5% and sorbic acid 0.25%
LoBob	Sof/Pro-Clean	Three specific surfactants and an anti fungal, all water soluble preserved with sorbic acid 0.1%, trisodium EDTA 0.25%
Optikem International	Sereine Extra Strength Daily Cleaner	Preservative-free; containing isopropyl alcohol and surfactants

Weekly Cleaners (Protein Removers)

Manufacturer	Trade Name	Formulation
Abbott Medical Optics (AMO)	Ultrazyme Enzymatic Cleaner	Subtilisin A; for use directly in a 3% hydrogen peroxide disinfection solution
Ciba Vision	Unizyme Enzymatic Cleaner	Subtilisin A

Daily Protein Removers

Manufacturer	Trade Name	Formulation
Alcon	Opti-Free Supracleans Daily Protein Remover	A preservative-free solution containing propylene glycol, sodium borate and highly purified pancreatin enzymes
Bausch + Lomb	Renu 1 Step Daily Liquid Protein Remover	Proteolytic enzyme (subtilisin), glycerin and borate buffer

Disinfecting Solutions and Combinations

Manufacturer	Trade Name	Formulation
Abbott Medical Optics (AMO)	Complete MPS Easy Rub Formula	A sterile, isotonic, buffered solution, preserved with polyhexamethylene biguanide (0.0001%), a phosphate buffer, Poloxamer 237, edetate disodium, sodium chloride, potassium chloride, and purified water. Complete Multi-Purpose Solution contains no chlorhexidine or thimerosal
	RevitaLens OcuTec Multi-Purpose Disinfecting Solution	A sterile, buffered aqueous solution with alexidine dihydrochloride 0.00016% and polyquaternium-1 0.0003% as preservatives/disinfectants, boric acid, sodium borate, Tetronic 904, edetate disodium, sodium citrate, sodium chloride, and purified water
Alcon	Opti-Free Express MPDS No Rub Lasting Comfort Formula	A sterile, buffered, isotonic, aqueous solution containing sodium citrate and sodium chloride, with edetate disodium 0.05%, Polyquad (polyquaternium-1) 0.001% and Aldox as preservatives
	Opti-Free Replenish Multi-Purpose Disinfecting Solution	A sterile, buffered, isotonic, aqueous solution used to clean, rinse, disinfect, store and recondition silicone hydrogel and soft contact lenses. Contains sodium borate, sodium chloride, propylene glycol, sodium citrate, TearGlyde (Tetronic 1304 and C-9 ED 3A) as a reconditioning agent and Polyquad and Aldox as preservatives
Bausch + Lomb	Biotrue Multi-Purpose Solution	A sterile, isotonic solution that contains hyaluronan, sulfobetaine, poloxamine, boric acid, sodium borate, edetate disodium and sodium chloride and preserved with a dual disinfection system (polyaminopropyl biguanide 0.00013% and polyquaternium 0.0001%)
	Renu Fresh Multi-Purpose Solution With Protein Remover	Sterile isotonic solution containing Hydranate (hydroxyalkyl phosphonate), boric acid, edetate disodium, poloxamine, sodium borate and sodium chloride, preserved with Dymed (polyaminopropyl biguanide) 0.0001%
	ReNu Sensitive Multi-Purpose Solution Gentle Formula	Sterile isotonic solution containing boric acid, edetate disodium, poloxamine, sodium borate and sodium chloride. Preserved with Dymed (polyaminopropyl biguanide) 0.00005% and edetate disodium 0.1%
Ciba Vision	Aquify MPS	5 Minute Multi-Purpose Solution For cleaning, rinsing, disinfecting and storage for soft contact lenses including silicone hydrogels Indicated for daily protein removal of lenses replaced in 30 days or less Preserved with polyhexanide 0.0001%
Sauflon Pharmaceuticals	Sauflon All in One Lite No Rub Multipurpose Solution	A sterile, isotonic solution that contains poloxamer, sodium phosphate buffer, sodium chloride and disodium edetate; preserved with polyhexanide 0.0001%. Contains no chlorhexidine or thimerosal

Hydrogen Peroxide Disinfection

Manufacturer	Trade Name	Formulation
Abbott Medical Optics (AMO)	The Oxyssept UltraCare Formula Disinfecting/Neutralizer	Oxyssept disinfecting solution: Microfiltered Hydrogen peroxide 3% (stabilized with sodium stannate and sodium nitrate, and buffered with Phosphates) and purified water in a preservative-free, sterile solution
		Oxyssept neutralizing tablets: Smooth, round, tablets that contain catalase, hydroxypropyl methylcellulose and cyanocobalamin (vitamin B ₁₂) with buffering and tableting agents
		Oxyssept Cup: A specifically designed lens cup that must be used with the UltraCare system. It consists of a single flared cup and a lens holder attached to the cap. The left lens basket and the gasket inside the top of the cap are blue. This will distinguish this cup from other lens cases
Ciba Vision	AOSsept Disinfection/Neutralization Solution	A sterile ophthalmic solution containing microfiltered hydrogen peroxide 3%, sodium chloride 0.85%, stabilized with sodium stannate and sodium nitrate and buffered with phosphates
	Disposable cup/disc packaged with product	Platinum-coated catalytic disc used for automatic neutralization in the AOSsept System
	Clear Care No Rub	Cleaning and disinfecting solution (red tip) 3% hydrogen peroxide, 0.79% sodium chloride, stabilized with phosphoric acid, a phosphate buffered system and Pluronic 17R4 (a cleaning agent). One solution for cleaning, disinfecting and removing protein for all soft contact lenses
Sauflon	One Step	One step cleaning and disinfecting solution with 3% hydrogen peroxide, built-in cleaner and wetting agent for all soft contact lenses

Subsonic/UVC Disinfection

Manufacturer	Trade Name	Formulation
PuriLens, The LifeStyle Company	PuriLens Plus Unit	15-minute automatic cleaning and disinfecting system. Subsonic agitation creates hydrodynamic shear to clean lenses. UVC light cross-links DNA in microorganisms or cells and causes instant death

Lubricants/Rewetting Drops

Manufacturer	Trade Name	Formulation
Abbott Medical Optics (AMO)	Blink Contacts Lubricant Eye Drops	A sterile, buffered, isotonic, preserved solution. This aqueous formulation includes purified water, sodium hyaluronate, sodium chloride, potassium chloride, calcium chloride, magnesium chloride, boric acid and is preserved with OcuPure (stabilized oxychloro complex) 0.005%. This preparation contains no chlorhexidine, no thimerosal and no other mercury containing ingredients
	Complete Lubricating and Rewetting Drops	A sterile, isotonic, buffered aqueous formulation that contains purified water, sodium chloride; preserved with polyhexamethylene biguanide 0.0001%, buffered with tromethamine as an emulsifier, hydroxypropyl methylcellulose as a lubricant, tyloxapol as a surfactant, and edetate disodium as a chelating agent. This preparation contains no chlorhexidine, no thimerosal and no other mercury containing ingredients
	Complete Blink-N-Clean Lens Drops	A sterile, isotonic, buffered aqueous formulation that contains purified water, sodium chloride; preserved with polyhexamethylene biguanide 0.0001% buffered with tromethamine as an emulsifier, hydroxypropyl methylcellulose as a lubricant, tyloxapol as a surfactant and edetate disodium as a chelating agent. This preparation contains no chlorhexidine, no thimerosal and no other mercury containing ingredients
Allergan	Refresh Contacts	Sterile, isotonic, buffered, preserved solution containing carboxymethylcellulose sodium, sodium chloride, boric acid, potassium chloride, calcium chloride, magnesium chloride, purified water and is preserved with Purite (stabilized oxychloro complex)
Alcon	Opti-Free Express Rewetting Drops	A sterile, buffered, isotonic aqueous solution that contains a citrate buffer and sodium chloride with edetate disodium 0.05% and Polyquad 0.001% preservative
	Clerz Plus Lens Drops	A rewetting and lubricating drop that fights protein buildup during lens wear. A sterile, buffered, isotonic aqueous solution that contains citrate/borate buffer and sodium chloride with edetate disodium and polyquad as preservatives and RLM 100 (PEG-11 laurel ether carboxylic acid) and tetronic 1304
	Opti-Free Replenish Rewetting Drops	A rewetting and lubricating drop that fights protein buildup during lens wear. A sterile, buffered, isotonic aqueous solution that contains citrate/borate buffers and sodium chloride with edetate disodium and Polyquad as preservatives and RLM 100 (PEG 11 laurel ether carboxylic acid) and tetronic 1304
Bausch + Lomb	ReNu Rewetting Drops	Sterile, isotonic, solution that contains boric acid, poloxamine, sodium borate, and sodium chloride; preserved with sorbic acid 0.15% and edetate disodium 0.1%
	ReNu MultiPlus Lubricating and Rewetting Drops	A sterile, isotonic solution that contains povidone boric acid, potassium chloride, sodium borate and sodium chloride; preserved with edetate disodium 0.1% and sorbic acid 0.1%
	Sensitive Eyes Drops	Sterile, buffered, isotonic aqueous solution containing a borate buffer system and sodium chloride preserved with sorbic acid 0.1% and edetate disodium 0.025%
Ciba Vision	Aquify Long Lasting Comfort Drops	A sterile solution containing sodium hyaluronate, sodium chloride, sodium phosphate and sodium perborate stabilized with phosphonic acid as a preservative. For use with soft and GP lenses
